

Tropical Storm Lane QuickLook
Posted: 06:00 HST 08/25/2018

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 8/25/2018 06:00 HST water levels across the Hawaiian Islands remain elevated above normal tide levels. Water levels range between 0.3 and 0.7 feet above tidal predictions.

The strongest winds are presently being observed at Nawiliwili (Kaua'i) and Mokuoloe (O'ahu) with winds around 20 kts and gusts up to 30 kts measured over the last several hours. Winds of 5 to 10 kts with gusts up to 15 knots are

being measured on the islands of Maui and Hawai'i. Barometric pressure has stabilized across the islands.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional real-time and historical inundation information for select stations affected by this storm, please visit Coastal Inundation Dashboard. For additional data, please see the Center for Operational Oceanographic Products & Services website.

Select Central Pacific Hurricane Center Advisory Information:

Tropical Storm Lane Advisory Number 45
NWS Central Pacific Hurricane Center Honolulu HI
500 AM HST Sat Aug 25 2018

...LANE MOVING SLOWLY SOUTH OF THE WESTERN HAWAIIAN ISLANDS...

WATCHES AND WARNINGS

----- CHANGES WITH THIS ADVISORY:

The Tropical Storm Warning has been discontinued for Hawaii County.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...

- * Oahu
- * Maui County...including the islands of Maui, Lanai, Molokai and Kahoolawe

A Tropical Storm Watch is in effect for...

- * Kauai County...including the islands of Kauai and Niihau

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area.

A Tropical Storm Watch means that tropical storm conditions are possible within the watch area.

Interests in the Northwestern Hawaiian Islands should monitor the progress of Tropical Storm Lane.

For storm information specific to your area, please monitor products issued by the National Weather Service office in Honolulu Hawaii.

DISCUSSION AND OUTLOOK

At 500 AM HST (1500 UTC), the center of Tropical Storm Lane was located near latitude 19.8 North, longitude 158.4 West. Lane is moving toward the north near 3 mph (6 km/h), and this motion is expected to continue this morning. This will likely be followed by a turn toward the west with an increase in forward speed starting later today or tonight. This westward motion is forecast to continue through Sunday. On the forecast track, the center of Lane will pass south of Kauai and Niihau later today and tonight.

Maximum sustained winds are near 60 mph with higher gusts.
Some weakening is forecast during the next 48 hours.

Tropical-storm-force winds extend outward up to 125 miles from the center.

The estimated minimum central pressure is 995 mb (29.39 inches).

HAZARDS AFFECTING LAND

WIND: Tropical storm conditions are still expected in and near outer rain bands that will affect Oahu and Maui County today. Tropical storm conditions are possible on Kauai starting later today.

RAINFALL: Lane's outer rain bands will produce excessive rainfall this weekend, which could lead to additional flash flooding and landslides. Lane is expected to produce additional rain accumulations of 5 to 10 inches in some areas. Localized storm total amounts well in excess of 40 inches have already been observed along the windward side of the Big Island.

SURF: Large swells generated by Lane will impact the Hawaiian Islands. These swells will produce high surf along exposed south and east shorelines today.

NEXT ADVISORY

Next intermediate advisory at 800 AM HST.
Next complete advisory at 1100 AM HST.
